Seeded Defects Log
Arshad Alikhan, Ashwin Mahesh, Richa Tenany, Turner Dunlop, Vishva Pandya

Defect No.	Defect	Output before seeding	Output after seeding	Suggested Correction	Severity
1	User is not shown error message if all fields in Login module are not entered	Login Module prompts user to enter all fields.	No prompt given to user.	Pass in error message to login.ejs file and display on the UI or set appropriate fields in the tags in the login.ejs file.	1
2	If an incorrect email is entered during login, user is redirected to broken link page instead of being shown the error "Email or password is different".	Login Module prompts user to try their credentials again.	No prompt given to user.	Check if email exists in user database and if it doesn't send error message to ejs.	2
3	Register Module- If email exists, user should be prompted to try again.	User stays on Register page and is shown the prompt "Email already exists"	Redirects to login page, and user is unaware that the account has not been made.	Redirection issue for when "Go!" is clicked. Render the register page again instead of redirection	2
4	Email regex is not correctly check for if email has spaces.	User should be prompted to enter new email.	No prompt shown because account is created.	Check the regex to make sure it accounts for all cases. Formation should be as follows: user@domain.com	2
5	User is not shown error message if all fields in Register module are not entered	Register Module prompts user to enter all fields.	No prompt given to user.	Pass in error message to login.ejs file and display on the UI or set fields in	2

				the tags in the newAcct.ejs file	
6	User is able to change password from the same link after already doing so once	Informs user that the token is invalid.	User is still able to change password. No error message shown.	Simply reset the date to now for user.resetPassDate.	3
7	User is able to enter in negative points for weight value	Task is not added to dashboard if negative value	User is able to add a task with a negative weigh to dashboard		3
8	User is able to add a task with no description	Task is not added to dashboard if there is no description	Task is added to dashboard if there is no description	In app.js set desc value to required	2
9	User is able to set only numbers as the title of a task	User is not able to add a task if there are only numbers for the title	User is able to add a task if there are only numbers for the title	Add a conditional to specify that title must have at least one alphabet	1
10	In all completed tasks when user clicks on details, the back button does not take the user back	User is able to use the back button to go to the original screen	User is not able to use the back button to go to the original screen	Link the back button to previous screen	1
11	User is not able to edit the weight of a task	User is able to edit the weight of a task	User is not able to edit the weight of a task	Change paragraph tag to input tag	3
12	When User inputs the month, some of the months are wrong	Date and Time Field are correct for all months	Some months are wrong	Look at the ngOnInit() for taskCard and see if all the months match.	1
13	When the User clicks to edit the section, the Health option is selected twice.	Work Social and Health are the three options	Health is now two options	Look at the html for edit-Task	1
14	When the User adds a new task, even though the	Social returns Social to the frontend and	Both Work and Social return Work	Look at the html for edit-Task	1

	user picks Social, it stores and returns Work to the front end	database			
15	User is able to add a task with a deadline that is earlier than the current day.	Invalid deadline returns an error in task creation and the task is not added.	User is allowed to create a task with an invalid deadline.	Add a conditional in the add task function that validates input using date comparison.	3
16	User sees all their tasks in the to-do panel.	User only sees tasks with a status of to-do in the to-do section of the dashboard.	User sees all their tasks in the to-do panel.	Add an additional key to the database query in /getTasks/todo	3
17	Incorrect display of completed tasks in dashboard.	User sees only the 12 most recently completed tasks in the done section of the dashboard.	User sees only 12 completed tasks, but not necessarily the most recently completed.	Add a sort statement to the database query that sorts on dateCompleted.	1
18	Comments are added twice.	Comments should only be added once.	When adding a comment there are duplicates.	Remove duplicate comments.push command.	2
19	New comments can be empty	A null or empty comment should return an error and not be posted.	User can add an empty comment.	Add conditional check to ensure comments aren't empty.	1
20	Pressing Cancel Still causes edit to Occur when editing a task	Changes should not be reflected in the card	Changes are reflected in the car	Change the function being called in the HTML when cancel is pressed	3
21	In progress section fetches tasks that are done instead of in progress	In progress section fetches the correct set of tasks	In progress section fetches the incorrect set of tasks	Look at the fetch API that is being used in the in progress dashboard section	3
22	Add Tasks sends weight that is not what user inputted	Add Task sends correct weight to server	Add Task sends weight that is 1 below what user inputted to server	Look at the backend for the add task component	2

23	Completed Task Section does not show formatted date	Completed Tasks section shows date in formatted, user-readable way	Completed Task section shows task in raw machine date format.	Add format date function in all-tasks section	1
24	Actual category not appearing in task category section for all tasks	Category section shows correct category	Category section shows task.category	Look at the HTML for category in all-tasks section	1
25	When adding a task, the Done and Cancel button do the opposite of what they are supposed to do	Cancel exits the user, Done adds the task	Done exits the user, Cancel adds the task.	Look at the html for the cancel and done buttons for add task	1
